***Note:** In this manual, press a key means to press the key and

release; press and hold a key means to press the key and hold for no less than 2 seconds.

Battery

The battery in original state has about 50% electricity quantity and you can use it after unpacking. It performs best after full charge/discharge for the first three times.

To remove and install the battery

To remove the battery: ① Push the back cover downwards;
② lift the battery from the rear and remove it.

To install the battery: ① insert the battery; ② put on the mobile phone cover.

Charging the battery

Connect the power supply of charger.

Insert the plug of the charger into the bottom of mobile phone (keep the surface with arrow upwards). Then, the electricity quantity indicator on upper right corner of the screen will be flashing circularly; if the mobile phone is power off when being charged, a charging indicator image will appear on the screen which indicates the battery is being charged.

If the mobile phone is still used when battery is low, the

charging indicator will appear after the charging has started for a while. If the battery status indicator on upper right corner of the screen is complete and won't flash, the charging is finished. If the mobile phone is power off, the image which indicates that charging is finished will be displayed on the screen. This course may cost 3-4 hours. It is normal that the battery, mobile phone and charger get hot in charging process.

Disconnect the AC outlet from mobile phone and charger when the charging is finished.

***Note:** Use charger approved by manufacturer to charge at ventilated places with temperature between 5°C and 40°C. It may bring danger if you use unauthorized charger and you will also violate the warranty clause.

Please charge the battery in time if the mobile phone is power off automatically or indicates "Low battery". If the electricity hasn't been run out before charging, the charging time will be shortened automatically.

The standby and call time provided by manufacturer are based on ideal working environment. The working time of battery depends on network status, environment and operating method in practice.

Make sure the battery is installed properly before charging and you can't remove the battery in charging process.

Disconnect the charger from mobile phone and power supply after charging.

If you don't disconnect the charger from power supply and mobile phone, the mobile phone will be charged again after a long time (about 5 to 8 hours) and the energy of the battery is wasted to a certain degree. It is not recommended because it will do harm to the performance and service life of the battery.

Connecting to network

SIM card

You must insert a valid SIM card before using your mobile phone. SIM card is the key for you to access digital GSM network. All information about network connection and call initialization, as well as the names and telephone numbers of Contacts and short messages you have received and saved are recorded in the metal surface area of the SIM card. You can remove the SIM card from your mobile phone and insert it into any other GSM mobile phone (the new mobile phone will read the SIM card automatically). Do not touch the metal surface area and keep the SIM card away from electricity and magnetism to avoid losing or damaging the information saved in SIM card. You can't access GSM network if the SIM card is damaged.

***Warning:** Please switch off the mobile phone before removing

SIM card. Inserting or removing SIM card with external power supply is prohibited, otherwise the SIM card may be damaged.

Installing/removing SIM card

The SIM card is usually stored in a card and you need to take it out carefully before installing.

Turn off the mobile phone and remove battery and external power supply.

Insert the SIM card into the slot as shown in the picture.

Please turn off the mobile phone and remove the battery before removing the SIM card.

Switching on/off

Press and hold the End key to switch on the mobile phone; to switch off the phone, also press this key.

If you switch on the mobile phone before inserting the SIM card, it prompts you to insert the SIM card. The mobile phone checks whether the SIM card is valid automatically after it is inserted.

The following prompts appear on the screen in sequence:

Input PIN1—if the SIM card password has been set.

Input phone password – if the password of the phone has been set.

Searching—The mobile phone is searching for available network.

Unlocking the SIM card

By setting PIN1 (personal identification number) code of the SIM card, you can protect your SIM card from illegal operation. If this function is enabled, you need to enter the PIN1 code every time you switch on the mobile phone, then you can unlock the SIM card and make or answer a call. In this condition, the SIM card can not be protected from illegal operation.

Press and hold the End key to switch on the phone;

Enter PIN1 code, use Right soft key to clear wrong input and press OK to finish. For example, if the PIN1 is 1234, you can input 1234.

If you input invalid password for three times continuously, the SIM card will be locked and you need to input PUK1 code. Contact your network operator if you don't know PUK1 code.

***Note:** Your network service provider will set a standard PIN1 code (4 – 8 digits) for your SIM card. Please change it with your private password as soon as possible.

Unlocking the phone

Phone lock can prevent your mobile phone from illegal

operation. You need to input the phone password when the PIN1 code (when PIN code is enabled) is input every time you switch on the mobile phone if this function is enabled, then, you can unlock the phone and make or answer calls. Users can clear the code (refer to Chapter 3.11.4 “Security settings”). In this condition, the mobile phone can not be protected from illegal operation.

Enter mobile phone password, press the Right soft key to clear wrong input and press OK to finish. For example: if the mobile phone password is 1122, you can enter 1122.

If you have forgotten your mobile phone password, please contact your distributor or local authorized service center to unlock your mobile phone.

Connecting to network

The mobile phone will search for network automatically after the SIM card is decrypted successfully (display “Searching for network” on the screen). The name of network operator will appear in the center of the screen once get connected.

***Note:** If there is prompt of “EMERGENCY” on the screen, it means that you are out of the normal coverage area (service area) of the network, but you can still make an emergency call according to the signal intensity.

Make a phone call

When the operator symbolize of the net appear in the screen, you can stir a dozen or connect to listen to a telephone. The manifestation holds left top Cape of the information show network signal strength.

The converse quality is under the influence of stumbling block bigger, so in the small scope

The converse quality is under the bigger influence of stumbling block, so you can raise converse quality effectively in the ambulation in the small scope.

Stir to make local telephone call

Using the numerical key to input the telephone number, then press stir number key to start calling. If you need change telephone number, please press right and soft key back to delete character list. The screen will show moving a picture when you are dialing the number. After the one you called hold the phone up there will be a converse appearance information, if you open the connecting hint sound, there will also be a hint sound. (need network support)

After the converse is over please press hang machine key to hang up a telephone.

Area number Telephone number Stir number key

Dial the fix telephone extension

Some fixed telephone extensions can't dial directly, you need to dial switchboard first, then stir extension number. If when you input telephone number, insert the character list "P" of the sign pause between the switchboard number and the extension number, this machine will complete for you all stir number, stir to connect extension automatically. The method which inputs "P" grows press * key (at this time show to hold up will show sign "P") The area number switchboard number P extension number stirs number key

An example of character list of using the sign of the pause:

For example, if you have a words news which uses by dialing number box system in 8880000 numbers, mailbox number is 6666, password is 8888. So you can press allow the following way to stir number:

8880000 P 6666 P 8888

The first part of this number used for dialing a conversation news box system.

After answering the call then send out 6666 to choose mailbox.

Before password 8888 send out, the second pause sign will delay 5 second. (The first P means waiting for a telephone connects, the later P means 5 postpone).

Stir to make international call

If you want to make international call you can press*key long, until the screen appears the prefix sign”+” of the international long-distance telephone, this will allow you to make a phone call from arbitrarily a nation before you don't know the region prefix number of the international call.

Input the telephone number that you have to stir the national area number of dozen and integrity immediately after input ex-prefix number. National area number according to usual practice, Germany is **49**, England is **44**, Sweden is **46** etc., as similar as to make international call usually, you should throw away a front metropolitan district while dialing the number of "0".

For example, if you want to dial the service hot line from other countries, you should stir:

+86 21 114 + The telephone number National code integrity

Dial key

Stir to make the telephoneEach of your telephone that you dialed and received are existed in a list of your telephone, the recently dialed and received calls are on the top of the list. Each number is classified by already dialed calls, answered calls and missed calls, the cellular phone also provides all telephone item to provide for you to look into all telephone records. After the telephone number list is full, the old number

is deleted automatically. If you want to check the list, please carry on as the following key operation:

Check the dialed, please press the dial key, the telephone numbers that appear in the list can be dialed by stir number key directly.

While telephone number row list appears, you can press an assurance to look into detail, after getting into an option you can press to save that number to the telephone directly.

Urgency call

If you are in a place that a network covers, you should call the urgency call. .If your network supplier didn't provide a service when travel extensively in that region, the screen would show "limit urgent call (EMERGENCY)", telling you that it can carry on that type of call. If you are in a place that the network covers, even though you have no SIM card that you can also carry on the urgency call.

Receive the telephone

If the established key that can be answered wantonly is open, then press arbitrarily key since can answer the call, otherwise you need press stir number key or left and soft key to answer the call, pressing left and soft key again can converse. If the

headphones have already been put on, you can also use the ear on board key to connect to answer the call. If you press inconveniently, you can establish an automatic key and keep it open, and the headphones have been already put on, after flapping bell or vibrating 5s, the telephone will answer the call automatically.

Call history

Your phone can keep one of your recent converse of record and all the converse time since you use the phone.

Call menu

While conversing, press don't need to lift can get in to the function of don't need to lift. The operation method is the same as the function of the menu operation method. That call menu can only be seen while conversing, and the function of the call is transferred, the call waits, converse in many ways etc. need the network support, keep in touch with your network supplier.
